ARTHRAMID® RESEARCH - Seeking Dogs for Australian Elbow Osteoarthritis Clinical Trial

Many years of authorised 2.5% iPAAG intra-articular administration to dogs and humans in the Northern Hemisphere have demonstrated long-lasting efficacy and safety in osteoarthritis treatment across species.

A pivotal ArthramidVet® Canine Elbow Arthritis Trial has commenced in Australia within nominated veterinary practices in NSW and Queensland, with the aim of adding dogs to ArthramidVet's existing APVMA and ACVM equine lameness registrations.

We are actively recruiting eligible dogs aged 2-12 years, of bodyweight 10-50 kg, with evidence of arthritis in one or both elbows but not in any other joints, and otherwise in good health. This blinded, controlled field study follows dogs for 12 weeks post-treatment.

For enquiries email research.anz@conturavet.com or phone Dr Edwina Lamkin on +61 (0) 408 899 940.

NOTE: ArthramidVet® is a registered S4 for the treatment of lameness in horses (APVMA No. 86728). Use in non-equine species is currently extra-label and at the veterinarian's discretion.
